

Mentoring SWAT

You should consider mentoring SWAT 771 to inspire prospective young women engineers. We understand that we are asking you to dedicate time from your busy schedule, however, you would be passing on your knowledge and passion for engineering and helping to create a new generation of excited engineers.

Over the build season, students and mentors build relationships that enable both parties to learn from one another and expand their ideas. Most of our mentors return because of this rewarding connection.

FIRST is not just about building robots. We also need mentors to guide us through the business plan, programming (Java) and media and marketing aspects of the team.

FIRST is based on a foundation of volunteers and mentors and a successful *FIRST* robotics team without mentors is nonexistent. With your help our *FIRST* robotics team could go beyond our limit and excel like never before. We hope you will consider mentoring our team.
